Lesson 1:

1.About Microsoft Excel

Microsoft Excel is a spreadsheet software from [Microsoft](#) used for:

- Data entry and management
- Calculations using formulas
- Creating charts and graphs
- Data analysis
- Reports and dashboards

1. What is Excel?

Excel is a spreadsheet application made of:

- **Workbook** = Excel file
 - **Worksheet** = Sheet inside the file
 - **Row** = Horizontal (1, 2, 3...)
 - **Column** = Vertical (A, B, C...)
 - **Cell** = Intersection of row and column (A1, B2, C3...)
-

Table creation

A	B
Name	Marks
Kom	95

Great! Let's start with creating your first table in Excel.

Step 1: Open Excel

Open Excel and create a Blank Workbook.

Step 2: Enter Data

Type the following:

A	B	C
Student ID	Name	Marks
101	Kom	95
102	Ravi	88
103	Priya	76
104	Arjun	91

Step 3: Convert to a Table

1. Select cells A1:C5
2. Click Insert → Table
3. Check "My table has headers"
4. Click OK

Now you have an Excel Table.

Benefits of Tables

- Automatic filtering
- Easy sorting
- Better formatting
- Expands automatically when you add new rows

2.column width

Great! Let's start with creating your first table in Excel.

Step 1: Open Excel

Open Excel and create a Blank Workbook.

A

B

Step 2: Enter Data

Type the following:

A	B	C
Student ID	Name	Marks
101	Kom	95
102	Ravi	88
103	Priya	76
104	Arjun	91

Step 3: Convert to a Table

1. Select cells A1:C5
2. Click Insert → Table
3. Check "My table has headers"
4. Click OK

Now you have an Excel Table.

Benefits of Tables

- Automatic filtering
- Easy sorting
- Better formatting
- Expands automatically when you add new rows

3.Entering date and time

Entering Date and Time in Excel

1. Entering a Date

Simply type the date in one of these formats:

29-06-2026

or

29/06/2026

or

A

B

29-Jun-2026

Excel automatically recognizes it as a date.

2. Entering Time

Type the time like this:

10:30 AM

or

10:30 PM

or in 24-hour format:

22:30

Excel recognizes it as a time.

3. Entering Both Date and Time

Type both together:

29/06/2026 10:30 AM

or

29-Jun-2026 22:30

Changing Date Format

1. Select the cells containing the dates.
2. Go to Home → Number group.
3. Click the Number Format drop-down.
4. Choose Short Date or Long Date.

Examples:

Short Date Long Date

29/06/2026 Monday, 29 June 2026

Changing Time Format

1. Select the time cells.

2. Press Ctrl + 1 (or right-click → Format Cells).
 3. Go to Number → Time.
 4. Choose a format such as:
 - 10:30 AM
 - 10:30:00 AM
 - 22:30
-

4. Saving an Excel Workbook

A Workbook is the Excel file you create and save (for example, Student_Data.xlsx).

Method 1: Save for the First Time

1. Click File.
2. Click Save As.
3. Choose a location (such as Documents or Desktop).
4. Enter a file name (e.g., Student_Data).
5. Click Save.

Keyboard Shortcut: Ctrl + S

- The first time you press Ctrl + S, Excel will ask you where to save the file.
 - After that, pressing Ctrl + S saves your latest changes instantly.
-

Method 2: Save As (Create a Copy)

Use Save As when you want another copy with a different name.

Example:

- Original: Student_Data.xlsx
- Copy: Student_Data_V2.xlsx

Steps:

1. File → Save As
 2. Choose a location.
 3. Enter a new file name.
 4. Click Save.
-

Excel File Formats

Format	Extension	Purpose
Excel Workbook	.xlsx	Standard Excel file (most common)
Excel Macro-Enabled Workbook	.xlsm	Used when the workbook contains macros
CSV (Comma Separated Values)	.csv	For sharing tabular data with other programs

For most of your work, save your files as .xlsx.
